Rapid Fill®

Automated Void Fill System

The Fastest Automated Solution for Creating Custom Void Fill

Rapid Fill® Automated Void Fill System

Automatic Void Detection and Bag Inflation Ensures Products are Always Locked in Place
Introducing a Breakthrough Advancement in Void Fill Packaging

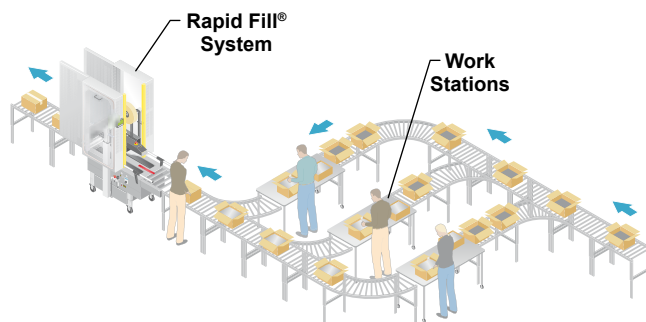

The Rapid Fill® automated packaging system from Sealed Air

The Rapid Fill® system has revolutionized void fill by inflating materials to the precise amount necessary every time, creating a custom solution for each package. The system can fill and seal up to 10 cartons a minute, doubling or tripling the speed of most traditional methods.

Support Multiple Work Stations

One Rapid Fill® system can support multiple pick-and-pack workstations, and the speed can reduce the number of overall packagers needed at the line. Operator interaction is minimal – just fold the flaps and the Rapid Fill® system does the rest!

Superior Material is Lightweight and Efficient

Rapid Fill® packaging bags use less material than traditional systems because there is no waste. The material is lightweight, on average 15% lighter than other materials, saving on transportation and shipping costs. Bags are inflated on-site, and can be deflated to less than 95% their inflated volume, making Rapid Fill® bags more space-efficient than bulkier materials.

How it Works

A simple three step process creates ideal protection, every time.

- 1 A packager clips a Rapid Fill® bag to a corner of the carton to be filled.
- 2 The flaps of the carton are closed, and the carton is then guided into the Rapid Fill® system, where it is sealed.
- 3 The Rapid Fill® bag is automatically inflated the correct amount through the carton wall.

Specifications

Electrical:

220–240 V
7.5 A 50/60 Hz

Air Requirements:

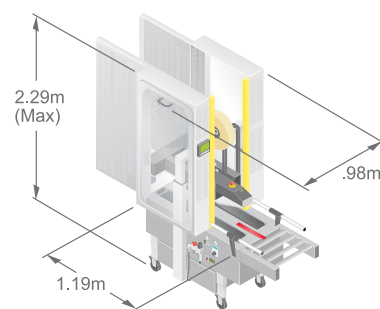

6.9 bars @ 227–283 LM

Weight:

254 Kg

Overall Size (L×W×H):

0.98m x 1.19m x 2.29m
